

## BLOCKSIL 20 & SF

Blocksil 20 & SF is a polymer based coating that bonds with the surface, ideal for protection against water, asbestos encapsulation and prevents asbestos fiber release in normal day to day use.

### Description

---

**Blocksil® 20 & SF are a single part liquid polymer compound:**

- Prevents asbestos fibre release into the air
- Complete system in a tin
- No odour option (SF)
- Spray option version (20)
- 20 year warranty
- Excellent resistant against diluted acids and alkalis
- 100 times more permeable than bitumen sealants
- VOC Free
- Remains flexible between -60° + 200° Centigrade
- Unaffected by UV
- Non-hygroscopic and will not support fungal growth
- Forms a seamless permanently elastic water proof skin
- DIN EN ISO7783-2 water vapour permeability
- Available in Any RAL Colour
- Rain free in two hours

### Suitable for

---

- Asbestos Encapsulation (Asbestos cement tiles, cladding sheeting & Insulation Board)
- Waterproofing and UV protecting of sprayed Polyurethane Foam Roofing
- All types of metal roofs that need waterproofing

**Always refer to Safety Data Sheet before use**
